

Pump Specification

Pressure ratio	1:300
Displacement volume (cm ³)	6,60
Discharge (bar)	1600

Performance Graf

The test unit GSF150-2 is a double acting air driven pump for oil, water or chemical media. The hydraulic unit is ready for connection which is provided for generating operating pressures up to 2100 bar. The hydraulic system can be used for all kinds of pressure testing and burst testing or for other functions requiring a determined pressure. The test unit can as well be used for injection of liquids and chemicals.
